Bachelor of Business (1986)

SKILLS

Experienced In:

AutoCAD, Revit, Vectorworks, Chief Architect, Maya, 3dMax, Rhinoceros, Adobe Creative Works Software, Archicad.

ACADEMIC EXPERIENCE

Thesis: Project Abstract:

The Healing Place is a rehabilitation center focusing on physical, emotional and psychological recovery of patients. The core of the healing center is its connection to nature and biophilic design. Biophilic design focuses on the aspects of nature and its healing effects on a person physically and emotionally. Creating architecture that engages itself with nature is the goal of the Healing Place. Creating a space that is relaxing and healing without the traditional characteristics of medical facilities will encourage patients during their recovery.

Boston STEM School was designed to reflect the technology driven education needs of today's schools. Open spaced classrooms allow students to work in groups or individual projects, incorporating outdoor classrooms provides additional classroom space.

Hotel Proforma Performing Arts Studio was designed for performers of the San Francisco studio to perform for the community with also spaces for residences above the studio center. The design concept was the idea of rhythm and this is reflected in the facade and the repeating walls and roofline of the building.

Lincoln Park Library located in San Francisco, California was designed to be a central library and community center for the area. The design divided spaces per use and allowed various activities to occur at the same time while still providing access to the site and visitors to enjoy the bay city views.
